Morgan Theleste

Data Engineer Intern | 6-month end-of-studies internship starting March 2027
Toulon, France | 06 29 18 15 13 | morgantheleste@gmail.com | linkedin.com/in/morgan-theleste-487a2830b | morgantheleste.github.io

PROFESSIONAL SUMMARY

Final-year engineering student in Data Science & Information Systems at SeaTech, experienced in the full modeling cycle: data preprocessing, leakage mitigation, benchmarking algorithms against a business-driven metric (false positive rate) and explaining results with SHAP. Seeking a 6-month Data Engineer internship starting March 2027.

TECHNICAL SKILLS

Machine & Deep Learning: Deep Learning, Machine Learning, Model Optimization, Computer Vision, Satellite Image Processing, Image Super-Resolution, Signal Processing, Random Forest, XGBoost, Explainable AI (SHAP), PyTorch, TensorFlow, OpenCV, Familiar with: LLM architectures, RAG
Data & Cloud: Python (pandas, NumPy, matplotlib), SQL, BigQuery, Google Cloud Platform, Data Preprocessing, Model Evaluation (FPR, F1-score)
Programming: Python, C/C++ (Linux), Java (GUI / HMI development), Matlab, Lua
Tools & Deployment: Linux, Docker, Git, CI/CD, FastAPI, Streamlit, Qt, SSH, SLURM / HPC (NVIDIA L40 GPU)
Other: Excel (advanced), PowerPoint, Word, AutoCAD

PROFESSIONAL EXPERIENCE

Software Engineering & Data Science Intern | KMUTT, CERSL Laboratory, Bangkok, Thailand 05/2026 – 08/2026

- Developed a Python/Streamlit web portal giving students and researchers self-service access to AI models (HAUNet super-resolution, dehazing), deployed with Docker on the university's servers.
- Connected the portal to the university supercomputer (SLURM cluster, NVIDIA L40 GPU) over SSH to run heavy computations remotely.
- Experimented and designed an image-tiling algorithm (256×256 tiles) that cut memory usage from 45+ GB to 3 GB, bypassing out-of-memory (OOM) errors.
- Debugged and stabilized deep learning model code, removing visual artifacts from output images.

PROJECTS

PhishML: Phishing Detection via Machine Learning | Personal / academic project 09/2025 – 06/2026

- Built an end-to-end detection pipeline on a balanced 50/50 dataset of ~18,000 URLs, with data-leakage mitigation and a production-ready encoding pipeline (OrdinalEncoder).
- Benchmarked three algorithms using False Positive Rate as the primary metric; selected Random Forest (0.056% FPR, 0.999 F1-score on test data).
- Used SHAP to identify the key phishing signals: network payload size, CORS errors, security headers.

E-Sports Draft Predictor (MLOps Pipeline) | Personal project 09/2026 – present

- Built an automated Riot API data extraction pipeline with rate limiting, storing match history in SQLite.
- Trained an XGBoost classifier, boosting accuracy from 45% to >60% via macro-level team composition feature engineering to mitigate data sparsity.
- Deployed the model via a FastAPI REST API, connected to an asynchronous HTML/JS frontend.

EDUCATION

Master of Science in Engineering (Diplôme d'ingénieur), Data Science, Information Processing & Systems | SeaTech School of Engineering (**INP** Group), Toulon 09/2024 – 09/2027 (expected)
Relevant coursework: Deep Learning, Machine Learning, Model Optimization, Satellite Image Processing (Python / OpenCV), Signal Processing, C++ on Linux, HMI Development (Java), SQL

B.Sc. Engineering Sciences (Licence Sciences pour l'Ingénieur) | University of Toulon 01/2022 – 01/2024

- Two-year research project (TIPE) alongside coursework on charge dynamics at water interfaces; authored a comprehensive technical report.

LEADERSHIP

President, SeaTech Sports Association (Bureau des Sports) 02/2025 – 02/2026

- Organized sports tournaments and student events of 300 to 4,000 participants; managed a team of 25 volunteers and a budget of over €20,000.

ADDITIONAL EXPERIENCE

Intern, MET-BETP civil engineering design office, Toulon (01/2025): assisted with technical drawings and plans; used AutoCAD and Excel for project tracking and data analysis.
Municipal Worker, City of La Valette-du-Var (01/2023 – 01/2024): maintained public spaces in a small team under strict safety and quality standards.

CERTIFICATIONS & LANGUAGES

Google Cloud Skills Boost badges: Big Data and Machine Learning Fundamentals (Jan 2026); Build a Certification Study Guide: PMLE (Oct 2025)
Languages: French (native), English (professional, TOEIC 900/B2+)
